

Create a simple page that uses Google Place Autocomplete to find place and show in map with following requirements

1. Textbox must be autocomplete action and get result from Google API (<https://developers.google.com/maps/documentation/javascript/examples/places-autocomplete>)
2. Must use redux (redux toolkit is allowed) to store result and display all searches that user tries
3. Use one of following Redux middleware in combination with Redux
 - a. Redux Thunk
 - b. Redux Promise
 - c. Redux Saga
 - d. Redux Observable
4. May choose Bootstrap, Tailwind, Material UI for styling
5. Design a friendly, usable and scalable code structure.

Optional

- Using es6 or above, higher order component pattern / custom hooks / render props pattern, react hooks, functional component.
- Mark a place as favourite by triggering webservice call to java spring boot API and save in database. Database can be mysql, mssql (preferred) or equivalent relational database.
